

PRODUCT INFORMATION

REMA SOFT RUBBER PASTE

General properties

REMA SOFT RUBBER PASTE is a solvent free, elastic, cold hardening soft rubber repair paste based on a modified polybutadiene rubber (BR).

REMA SOFT RUBBER PASTE, applied in conjunction with **PRIMER R**, gives an excellent adhesion to various substrates such as steel, soft and hard rubber linings, graphite and acid resistant ceramics.

The excellent properties of **REMA SOFT RUBBER PASTE** are its good chemical resistance against non-oxidising mineral acids, bases, aqueous phases and especially against media containing a high amount of solids.

REMA SOFT RUBBER PASTE can be used in a temperature range from - 40 °C to + 90 °C.

Fields of Application

REMA SOFT RUBBER PASTE has been developed for the repair of rubber lined vessels, pipes, rollers and drums, chutes, and channels and further for the transition areas of hard and soft rubber lining on flange facings.

Application Examples

a) Repairs of Rubber lined drums, rollers, support rollers, chutes, and channels

b) Repairs to wear resistant rubber linings of polymers based on natural, styrolbutadiene- and nitrile rubber as well as on polyurea systems

c) Filling of groves and impact areas of rubber lining, such as in hoppers and coal bunkers.

d) Repairs on soft rubber linings on a hard rubber under-layer, in the soft rubber level.

e) Repairs on flange lip areas, which are subsequently covered by flange gaskets. (Maximum half the length of the bevel)

f) Repairs of special rubber linings based on bromobutyl, chloroprene and chlorosulfonated polyethylene polymers.

Surface Preparation

The surface to be repaired must be free from oil, grease and chemicals and is to be ground with a 24 grit grinding disc and if necessary cleaned with cleaning fluid.

Processing

The **REMA SOFT RUBBER PASTE** repair system consists of **PRIMER R** and the twocomponent paste consisting of Components A + B.

The two components are to be mixed properly before application.

Mixing the individual components

Mixing Ratios	Weight Ratios [kg]	Volume Ratios [I]
PRIMER R	100	100
REMA SOFT RUBBER PASTE		
Component A	100	100
Component B (Hardener)	5	6

Application time (pot life) *

Temperature	Primer	Paste
+ 15 °C	Approx. 240 min.	Approx. 40min.
+ 20 °C	Approx. 180 min.	Approx. 30 min.
+ 30 °C	Approx. 80 min.	Approx. 10 min.

* Note: The pot life and hardening times are dependant on the environmental influences such as ambient temperature, air humidity, ventilation etc. The times indicated are to be understood as guidelines only; the ideal times must be determined locally, with consideration to the prevailing climatic conditions.

Materials consumption

PRIMER R

REMA SOFT RUBBER PASTE (A+B)

about 0.2 kg/m² about 1.4 kg/m² (per 1 mm thickness)

Shelf life

The **REMA SOFT RUBBER REPAIR PASTE** soft rubber paste can be stored without any loss of quality in originally sealed containers for up to 6 months at temperatures up to + 25 °C. The DIN standard 7716 is to be observed.

PRIMER R	24 month
REMA SOFT RUBBER PASTE, Component A	6 month
REMA SOFT RUBBER PASTE, Component B (hardener)	24 month

Application

a) Application of the primer

Apply one thin coat of the **PRIMER R** to thoroughly cover the complete repair area. This applied primer should be allowed to dry for at least 2 hours at + 23 °C ± 2 °C.

b) Repair with **REMA SOFT RUBBER PASTE**

Shortly before use, mix components A and B of the **REMA SOFT RUBBER PASTE**, avoiding trapping air as far as possible, until a paste is produced which can be applied with a trowel.

Apply the paste with a trowel on to the prepared repair area.

Metal surfaces and joint areas should be covered thinly with the paste, before these areas are filled to the required thickness, preventing any blisters or air being trapped.

When applying the paste, assure that no cavities remain.

<u>Hardening</u>

The product hardens in approx. 24 hours at + 23 °C \pm 2 °C. This period can be shortened by warming the area at approximately + 60 °C with either warm air or radiators.

Where necessary the repair area could be surface ground after hardening.

Available Packing Units

Product Description	Packing [kg] *	Product No.
PRIMER R	0.25	525 2901
REMA SOFT RUBBER PASTE		
Component A black	0.5 5.0	525 2853 525 2846
Component A brown	0.5 5.0	525 2877 525 2860
Component B (Hardener)	0.025 0.25	525 2891 525 2884

* Special container sizes can be supplied on request
